

INITIAL OBSERVATIONS

One of the first things I noticed while I was compiling the data was the number of text messages. Prior to starting the assignment I was thinking there would be a lot of facebook and instagram communications. While I spent a lot of time on those two services I didn't use them a lot for communication.

It's a little hard to discern any patterns. This is probably because it is difficult, at least for me, to see patterns just by looking at numbers.

I don't think there was much insight to gain from the temperatures.

Looking at the spreadsheet what seems like it has the most potential for insight is the location information and the time information.
